Office Action Summary

Art Unit: 2858

1. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not clear what is meant by test socket in any of the claims. No structure is given for the socket. The only structure deals with a contact that is a part of the test socket. The method of manufacture claims only give details of making a contact and the steps for making a test socket are unknown. The method of use claims have the same type of problem as it is not clear what would be used for the test socket. Claims 9 and 20 are totally indefinite. They are analogous to claiming that of which a picture^{is} taken in a patent application where the invention is a camera. In the case of a camera the picture could be of anything from a flea to a battleship. In the present case that tested could be anything from a flea to an IC chip. Claiming a flea would be non-statutory.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

3. (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-20 are, insofar as understood, rejected under 35 U.S.C. 102(b) as being fully anticipated by Fischer or Cobaugh et al.
